

IEEE Open Access

IEEE and Open Access

IEEE recognizes that institutions worldwide have a mission to support open access (OA) in scholarly publishing. Authors at these institutions publish in OA titles to make their research available to all reader communities. IEEE has developed open access institutional options to help an institution actively support OA and drive submissions from authors at their institutions. The reputation and global reach of IEEE make it the best choice for institutions and authors publishing OA technology research.

Why Publish with IEEE?

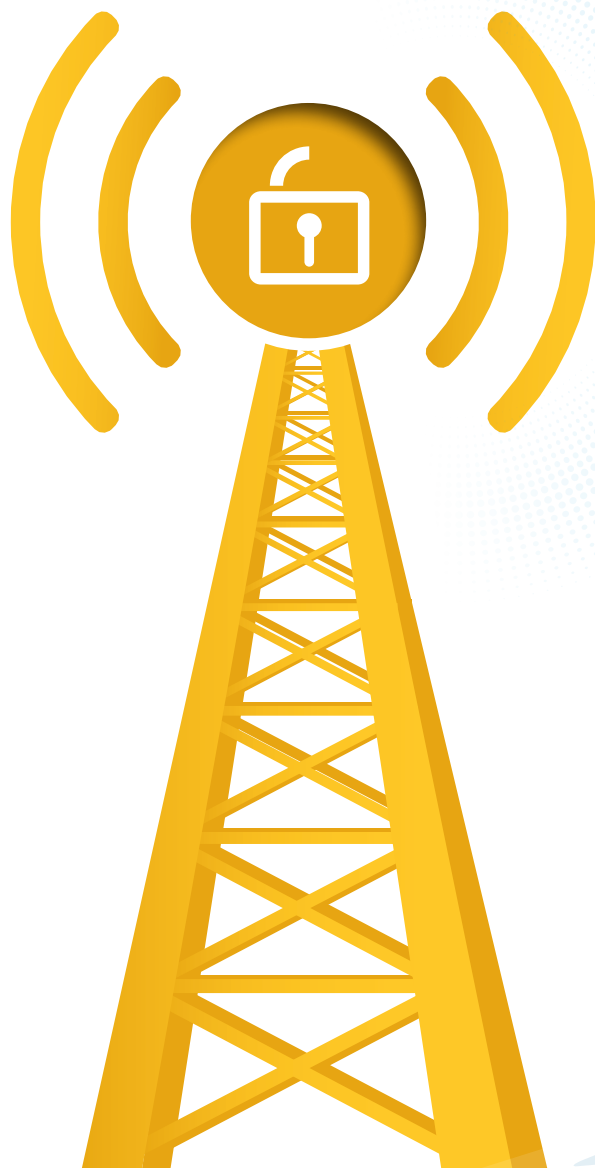

- **Maximize exposure** for published articles via the IEEE Xplore® digital library with more than 11 million downloads and 5 million unique users per month
- **Gain credibility** for research by publishing in the most highly-cited journals year over year
- **Drive innovation** by being part of the more than 125-year history and highly-regarded IEEE reputation for advancing technology

IEEE OA Quick Fact

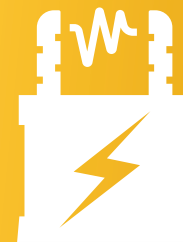

Institutions can select to participate in IEEE Institutional Partnership Options:

- IEEE Open Access Deposit Account
- IEEE Open Access Partner Discount

IEEE OA Quick Fact

Convenient author-pays publishing model

IEEE Open Access Options for Authors

Authors publish with IEEE to gain maximum exposure and credibility for their research and groundbreaking articles. Since IEEE publications continue to be the most highly cited in numerous technology fields, IEEE authors become part of the highly regarded IEEE reputation and its more than 125-year history of innovation. Consistent quality and high demand make IEEE publications the trusted source for researchers in academia, corporations, and government. Authors can choose to publish articles in the following types of IEEE OA publications.

IEEE Access®

IEEE Access is an award-winning, open access, multidisciplinary journal in the growing IEEE open access publishing program. The scope of this all-electronic, archival publication comprises all IEEE fields of interest, emphasizing applications-oriented and interdisciplinary articles.

Hybrid Journals

All IEEE transactions, journals, and letters offer an OA option, which permits both traditional subscription-based content as well as open access, author-pays content. Spanning all areas of technology, these journals tend to have an established impact factor and are well respected in their fields.

Topical Journals

IEEE is pleased to introduce these fully open access journals. They are dedicated to a specific subject area, contain author-pays articles, and are delivered online only.

• IEEE Photonics Journal

Covers issues ranging from fundamental understanding to emerging technologies and applications within the photonics field. It is the first IEEE fully open access journal.

• Journal of Translational Engineering in Health and Medicine

Focuses on interdisciplinary collaborations between researchers, healthcare providers, and industry, while publishing results and best practices from these translational efforts.

• IEEE Journal of the Electron Devices Society

Features high-quality research in the field of electron and ion devices, ranging from fundamentals to applied research.

• IEEE Journal on Exploratory Solid-State Computational Devices and Circuits

Focuses on the exploration of materials, devices, and computation circuits to enable Moore's Law to continue for computation beyond a 10–15 year horizon.

• IEEE Power and Energy Technology Systems Journal

Focuses on the development, planning, design, construction, maintenance, installation, and operation of equipment, structures, materials, and power systems.

IEEE Open Access Institutional Partnership Options

Institutions worldwide actively support open access while trying to assist their authors in publishing research in open access publications. IEEE open access options allow authors to publish in respected, high-quality IEEE journals while also enabling academic institutions and corporations to comply with open access policies.

Typically, authors are required to pay an article processing charge (APC) when submitting an article for publication. IEEE has developed two IEEE open access institutional options to facilitate the publishing process for authors and the institution. Now, institutions can easily encourage authors to publish in IEEE open access publications by selecting an IEEE open access option based on the institution's specific open access needs:

IEEE Open Access Deposit Account:

How it works: An institution funds full payment of the APC at a discounted rate.

A prepaid deposit account in which an institution pays in advance to cover article processing charges for an institution's authors. It completely covers the APC fees for authors publishing in IEEE open access journals. The account funds must be used within two years. Upon publication, the full article processing charge for the journal in question, minus the discount that applies, will be deducted from the account.

IEEE Open Access Partner Discount Fee:

How it works: An institution funds a discount of the APC and the author pays the remaining balance at a lower rate. IEEE open access partners pay a flat-rate annual fee based on the number of possible authors in their institution, including faculty, researchers, and graduate students at the institution in electrical engineering, computer science, and related disciplines. When authors from the institution are published in IEEE open access journals, a discount is automatically applied to the APC fee.

Flexible Options for Any Size Budget

IEEE has different options designed to make it easy for institutions to assist their authors and show their support for open access. Ask your IEEE sales representative for a custom quote.*

Options to Choose for Author Publishing Agreements

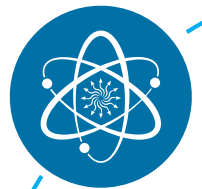

As part of IEEE efforts to provide authors with alternatives to traditional publishing, the IEEE Open Access Publishing Agreement (OAPA) has been developed for manuscript submissions to IEEE open access publications. The OAPA asks authors to transfer copyright to IEEE, thereby authorizing IEEE to protect the work against copyright infringement or plagiarism. Authors' papers are openly accessible to all users in IEEE *Xplore*, and authors may post the final, published version of their papers on their own websites. Authors can also choose a Creative Commons Attribution License (CC BY). A CC BY license allows authors to retain copyright in the work, but also carries very broad rights for end users. The corresponding author can easily select the publishing agreement of preference after acceptance. For more information, refer to the FAQs at open.ieee.org

* Purchase of an IEEE Open Access Institutional Partnership has no impact on editorial decisions regarding acceptance of articles submitted. The review of IEEE open access articles is done in accordance with established IEEE publishing policies.

IEEE OA Quick Fact

All published articles are maintained and discoverable via the IEEE *Xplore* digital library to millions of users worldwide

Benefits of Open Access Publishing with IEEE

Institutional Benefits

- Helps authors, funding agencies, academic institutions, and others gain maximum exposure for their research and the research they fund
- Encourages and makes it easier for authors to publish in open access journals
- Flexible options for any size organization
- Cost savings with significant discounts on APC fees for all researchers at partner institutions
- IEEE Institutional Partner web page will showcase institutions and their articles

Author Benefits

Findability. Credibility. Flexibility.

Authors publish with IEEE for the heightened visibility, professional credibility, and flexibility of the IEEE open access program.

Optimized Visibility

Eleven million downloads each month is strong evidence that the IEEE *Xplore* digital library provides authors with the visibility they seek.

IEEE Reputation

Authors become part of a stellar IEEE reputation and its more than 125-year history of innovation. Past and present authors include nearly two dozen Nobel Prize-winning innovators.

Trusted Content

IEEE journals are the most highly cited in a number of technology fields, which gives IEEE authors a distinct mark of credibility within their fields of interest.

Opportunities to Publish

Authors can choose from more than 130 leading journals and transactions.

Streamlined Publication

The IEEE web-based workflow tools shorten the time from submission to publication while allowing authors to track a paper's progress. IEEE publishes online articles, not issues, so there is no additional wait for an entire journal issue to be assembled.

Editorial Development

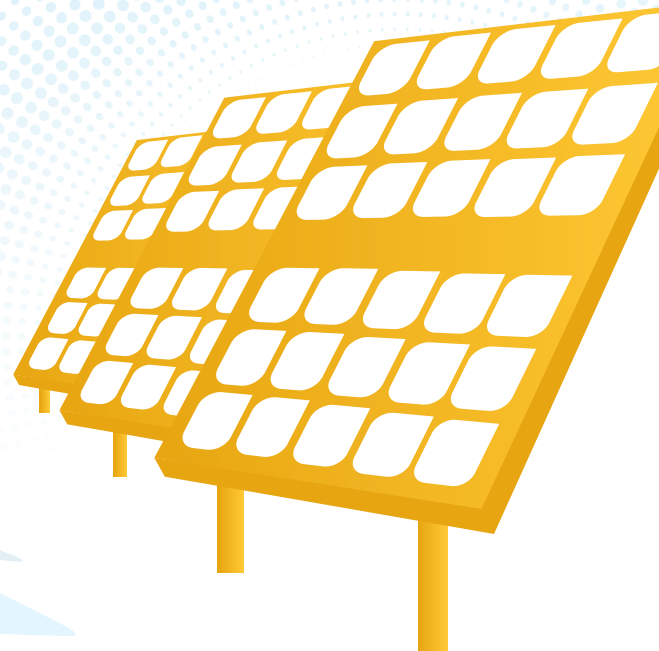

Tools are available to help manage your workflow and make it easier to collaborate, reference, publish, and deliver your work to readers and researchers.

Peer Review

The peer-review process—required prior to acceptance for publication or presentation—ensures the high quality of every article submitted to, and published by, the IEEE. The author benefits from peer-review feedback, while the reader is assured thoroughly vetted, credible research.

Referencing and Searching

IEEE helps authors maximize the discovery of their work. IEEE *Xplore* is indexed by Google™, allowing Google search results to include links to IEEE *Xplore*. IEEE also maintains relationships with leading abstract and indexing services.

IEEE OA Quick Fact

Each published article is accompanied by usage and citation data, with content indexed by all major A&I databases including Inspec®, Ei Compendex, Scopus, Clarivate Analytics WoS, EBSCOhost, and Google Scholar, among others

IEEE OA Quick Fact

Multiple open access options for authors:

A multidisciplinary journal, hybrid journals, and fully open access topical journals

Author Tools and Resources

IEEE offers authors a number of tools and resources to encourage the proper development of scientific papers and ease the process of submitting a manuscript for publication in IEEE titles. IEEE is dedicated to helping authors learn how to prepare, write, and submit quality technical articles with tools and resources for both first-time and established authors:

- Publication Recommender
- Article Templates
- Graphics Analyzer
- LaTeX Analyzer
- Reference Preparation Assistant
- PDF Checker
- AuthorLab
- Author Responsibilities and Rights
- Monthly Newsletter

All of these tools and resources are available in the IEEE Author Center.

Highly-Cited, Leading Content

Authors publish with IEEE for heightened visibility, professional credibility, and the flexibility of the IEEE open access program. IEEE continues to be the most cited publisher in new technology patents, and, according to the most recent Journal Citation Reports (Clarivate Analytics), IEEE publishes the top journals in electrical and electronic engineering, along with the top journals in many other fields of technology.

Authors who opt to publish in IEEE open access titles will be publishing in some of the world's leading, most highly regarded, scientific, and established periodicals.

IEEE Xplore Digital Library www.ieee.org/ieeexplore Email: onlinesupport@ieee.org

IEEE Xplore Digital Library Features

All IEEE open access content is delivered via the IEEE Xplore digital library, which includes:

- More than 4.5 million documents in full-text PDF format, with more than two million in a robust, dynamic HTML format
- Multiple authentication options for on-site, remote, and mobile users
- INSPEC abstract and citation records
- A mobile-friendly design
- Daily content updates
